2012

Oregon 4-H Science Rich Handbook Series

Focus on the

4-H Horticulture

Project

Oregon State University
Extension Service

Welcome to 4-H Science

This handbook series was developed to help Oregon 4-H youth development professionals and volunteers become familiar with the national 4-H science framework and how to think intentionally about 4-H Science programming. It will help improve the understanding and delivery of science within appropriate 4-H projects.

4-H, with its direct connection to the Cooperative Extension System's cutting edge research and the resources of the nation's 106 land-grant universities and colleges, provides youth with hands-on learning experiences that foster exploration, discovery, and passion for the sciences. Science is one of the three national Mission Mandates for 4-H. 4-H Science programs support youth to develop science, technology, engineering and applied math (STEM) skills.

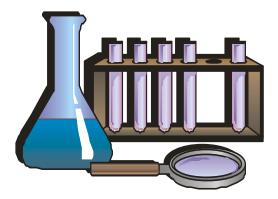

This handbook will

- 1. Define 4-H Science
- 2. Introduce tools to focus on 4-H Science in this project area
 - a. 4-H Science Checklist
 - b. 4-H Science Eight Essential Elements
 - c. 4-H Science Inquiry in Action Flowchart
 - d. 4-H Science Logic Model
- 3. Provide An Example of a Science Rich 4-H Inquiry Activity

Adapted and written by Virginia Bourdeau, 4-H Youth Development Professor, Oregon State University Extension Service.

Oregon State University Extension Service offers educational programs, activities, and materials—without discrimination based on race, color, religion, sex, sexual orientation, national origin, age, marital status, disability, or disabled veteran or Vietnam-era veteran status. Oregon State University Extension Service is an Equal Opportunity Employer.

Why 4-H Science?

The National Academy of Science's 2007 *Rising Above the Gathering Storm* report stated that, "the United States presently faces a significant challenge - young people are not prepared with the necessary Science, Engineering and Technology workforce skills to compete in the 21st century." In their 2011 review of America's position five years later, entitled *Rising Above the Gathering Storm, Revisited: Rapidly Approaching Category 5*, the Academy committee's unanimous view is that our nation's outlook has worsened.

The 2009 National Assessment of Educational Program report indicates Oregon 8th grade students are proficient in math (37%) and science (35%) slightly above the national average. However, just 15% of Hispanics and 12% of Black 8th grade students are proficient in math compared to 41% of White students. For science, just 12% of Hispanics and 13% of Black 8th graders are proficient compared to 40% of White students. The percentage of Oregon 8th grade students who reported they "never or hardly ever" design a science experiment was 35%, compared to 39% nationally. The percent of Oregon 8th grade students who report that they "never or hardly ever" write reports on science projects was 43%, compared to 47% nationally.

The national 4-H Science Mission Mandate targets addressing these needs at the local level through the broad range of 4-H projects which are based on science. 4-H Science programs reach more than 5.9 million youth in urban, suburban and rural communities across the country. 4-H Science programs support youth to develop science, technology, engineering and applied math (STEM) skills. Oregon 4-H youth development professionals and volunteers can help address this need using the resources and tools in this handbook.

1. The 4-H Science Checklist

The 4-H Science Checklist is provided in Appendix A. The checklist includes seven items that have been identified as the most critical program components to include in a 4-H Science Program. You may be thinking, "I don't lead a 4-H Science Club! I'm just a Horticulture club leader." The goal of the checklist is to help 4-H youth development professionals and volunteers identify and reinforce the science learning opportunities across a variety of 4-H projects.

A paragraph at the top of the check list explains, "A 'Science Ready' 4-H experience is a program that is framed in science concepts, based on science standards and intentionally targets the development of science abilities and the outcomes articulated by the 4-H Science Logic Model. Additionally, it integrates the Essential Elements and engages participants in experiential and inquiry based learning."

Let's look at what is included in the program components of a "Science Ready" 4-H experience.

• National Science Education Standards

These standards are used by Oregon's Department of Education to develop the science benchmarks for K-12 education. The national standards provide a common and consistent base of quality content on which 4-H program design, development, delivery and assessment is built.

• 4-H Science Abilities

This section includes a list of 30 science abilities or practices that are skills used in science, engineering and technology. These abilities can be used across 4-H project areas to help youth unleash their natural curiosity about the world. Youth will use these skills and understand what it means to think and act like a scientist.

• Youth Development- Essential Elements

Oregon 4-H youth development professionals and volunteers are already addressing these opportunities in their work with youth. The four needs of youth to experience mastery, independence, belonging and generosity are supported by the Eight Essential Elements of Positive Youth Development. Specific examples of how 4-H youth development professionals and volunteers can implement these are provided in the 4-H Science: Eight Essential Elements (Section 2) in this handbook.

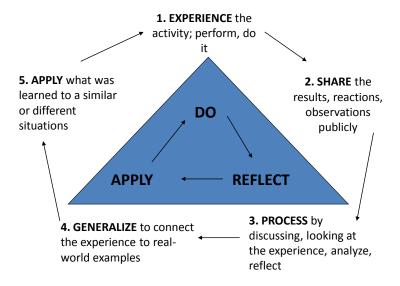

• Trained, Caring Adults and Volunteers

Oregon 4-H youth development professionals and volunteers are provided a variety of opportunities, including this handbook, to increase their skills as front-line youth workers. This handbook will help you to incorporate the 4-H Science Checklist, 4-H Science Logic Model, 4-H Science Inquiry in Action Flow Chart, and 4-H Science Core Competencies into your programming.

• An Experiential Approach

Oregon 4-H youth development professionals and volunteers are familiar with the 4-H experiential learning model. All 4-H project materials rely on this approach to create and reinforce learning.

4-H Experiential Model

• Inquiry to Foster Creativity and Curiosity

"Inquiry is a process that all individuals naturally use in approaching new situations and solving problems in life. By engaging in inquiry, ...children...gain experience...that will improve their capacity to handle life situations and solve everyday problems." (Edmund Marek and Ann Cavallo, 1997). Inquiry can happen in a variety of ways across 4-H programs. Ideas on encouraging inquiry and use of the Inquiry in Action Flow Chart (Appendix C) will be presented in Section 3 of this handbook.

• 4-H Science Logic Model

The 4-H Science Logic Model articulates the opportunity to achieve science outcomes across 4-H education programs. It is provided in Appendix D. Outcomes happen at three levels. Short-term outcomes are those that happen immediately after an education experience such as knowledge gains. Intermediate or long-term outcomes happen after the learner has a chance to integrate their new knowledge into different actions.

2. 4-H Science Core Competencies: Eight Essential Elements

One framework for understanding youth development in 4-H is the eight essential elements. This framework provided the structure for development of the 4-H Science Core Competencies. The 4-H Science Core Competencies identify specific actions or behaviors of 4-H youth development workers and volunteers that create a positive atmosphere or context for learning. The four needs of youth to experience **mastery, independence, belonging** and **generosity** are supported by the Eight Essential Elements of Positive Youth Development. These are item 3 on the 4-H Science Checklist. A 4-H Science Competency Self-Assessment is provided in Appendix B.

Caring Adult (Belonging)

4-H youth development professionals and volunteers understand that each young person benefits from a positive relationship with a caring adult by:

- 1. Communicating the capacity of all youth to learn and experience success.
- 2. Being willing to learn alongside youth.
- 3. Being comfortable not having all the answers.
- 4. Demonstrating support for all youth.
- 5. Understanding and caring about youth and their families.
- 6. Appreciating the context in which youth and families live.

Safe Environment (Belonging)

4-H youth development professionals and volunteers create an emotionally and physically safe learning environment by:

- 1. Modeling strategies for conflict resolution.
- 2. Encouraging youth to share new ideas and different perspectives.
- 3. Modeling and facilitating how to give and receive constructive criticism.

Inclusive Environment (Belonging)

4-H youth development professionals and volunteers design inclusive learning environments by:

- 1. Promoting teamwork and cooperation.
- 2. Providing opportunities for youth to teach and learn from each other.
- 3. Demonstrating respect for others.
- 4. Fostering an environment of mutual respect for others.

See Oneself in the Future (Independence)

4-H youth development professionals and volunteers nurture an atmosphere of optimism and a positive belief in the future by:

- 1. Encouraging the belief that all youth can learn science or pursue science careers.
- 2. Creating a science-friendly learning environment.
- 3. Promoting science careers for all youth, regardless of their gender, race, or ethnicity.
- 4. Demonstrating how science can improve the world.

Values and Practices Service to Others (Generosity/ Mastery)

- 4-H youth development professionals and volunteers encourage an ethic of caring and civic responsibility by:
 - 1. Helping youth connect to the community through service projects.
 - 2. Encouraging empathy for others.
 - 3. Engaging youth in real world science activities that consider the needs of others.
 - 4. Understanding the positive and negative effects that science has on humans.

Opportunities for Self-Determination (Independence)

- 4-H youth development professionals and volunteers encourage and support independence in youth by:
 - 1. Designing experiential, inquiry-based opportunities for youth to learn 4-H Science skills.
 - 2. Challenging youth to explore new or different 4-H Science projects and areas of learning.
 - 3. Supporting youth in achieving their goals in the face of setbacks.
 - 4. Knowing how to foster an increasing development of skills in youth.

Opportunities for Mastery

- 4-H youth development professionals and volunteers provide opportunities for youth to develop skills, competence, and expertise by:
 - 1. Designing experiential, inquiry-based opportunities for youth to learn 4-H Science skills.
 - 2. Challenging youth to explore new or different 4-H Science projects and areas of learning.
 - 3. Supporting youth in achieving their goals in the face of setbacks.
 - 4. Knowing how to foster an increasing development of skills in youth.

Engagement in Learning (Mastery)

- 4-H youth development professionals and volunteers encourage youth to direct and manage their own learning by:
 - 1. Assisting youth in setting realistic goals of their own choice.
 - 2. Encouraging an inquiry approach to learning and exploration.
 - 3. Providing sufficient time and an appropriate environment for thorough learning.

3. 4-H Science Inquiry in Action

The *National Science Education Standards* (1996) employ Science as Inquiry as a skill across all science content areas. Like life skills in traditional 4-H projects, the process of using inquiry supports content learning. Oregon's 4-H Science Inquiry in Action Flowchart (Appendix C) shows the relationship between the 4-H Experiential Learning Model and the steps applied in science inquiry.

On the Inquiry in Action flowchart, note that the first two steps in the process are led by the coach or leader. These are, "1. Determine what learners know or have observed. Identify knowledge gaps or misunderstandings." and, "2. What do learners want to know? What questions do learners have?" These two steps are where the leader introduces the topic and engages the learners in using their inquiry process skills.

Learning to lead learner-centered, inquiry based activities can be a challenge for 4-H youth development professionals and volunteers who are more familiar with prescribed project activities which follow cookbook-like steps to a known outcome. With repeated application of the inquiry model – learning by doing – leaders and learners become familiar with the steps applied in science inquiry. Learners will soon take initiative and become engaged in designing their own learning experiences.

Steps 3 through 10 of the flowchart are intended to be primarily learner driven. For ease of management, youth can be put into teams to work on an inquiry activity. There are a variety of ways the leader can proceed with facilitating inquiry. In *Guided Inquiry*, learners are provided with a problem to investigate and the materials necessary to carry out the investigation. The learners devise their own procedure to solve the problem. The state 4-H project page for Science, Engineering and Technology (http://oregon.4h.oregonstate.edu/science-engineering-and-technology) has a link to ten videos that show examples of how to lead guided inquiry activities in a selection of 4-H projects.

A second way of facilitating is called *Open Inquiry*. The learners formulate their own problem to investigate and devise strategies to carry out their investigation (Steps 4-6). This can include determining which equipment to use to collect information from a selection provided and creating their own data chart to record information.

Science education can be improved by immersing learners in the process of using scientific knowledge to "do" science. Informal learning environments are ideal settings for learners to practice skills necessary for scientific inquiry. Experiential learning may be defined as learning based on personal experiences or direct observation. Experience and observation are key to the scientific inquiry process. An example of a project activity using inquiry will be presented next in this handbook.

4. An Example of a Science Rich 4-H Horticulture Inquiry Activity

In this section, a lesson in the Horticulture project book Level A: *See Them Sprout* called While you Wait, Seeds Up Close, Part 2, Geminating Seeds, page 17, will be adapted to be Science Rich. This is how the lesson is presented in the project book:

YOU NEED

- several paper towels
- small plastic bag
- long sheet of paper
- pencil
- magnifying glass, optional
- 10 lima or kidney bean seeds soaked overnight
- 1. Plant a question about the seed that has to do with sprouting:____
- 2. Sprout a guess. I predict:____
- 3. Get Growing:

Dampen a paper towel. Fold it once and place all the seeds on it. Fold it again and place it in a plastic bag for a week. Keep it in a warm place. Write down the date. Moist seeds should sprout in 7 to 10 days.

4. Record what you see:

Make a folding "book" so it's easy to write down what you see. Fold a long strip of paper so it looks like an accordion. Look at the seeds every day. Every time you observe a change in your seeds, draw on one section of your folding book.

5. Harvest your findings;

After a week or so, unfold your, "book" and look at the pictures. What Happened? You probably have a storyboard about "How a Seed Sprouts."

Employing the 4-H Science Checklist

Remember, the 4-H Science Checklist (Appendix A) includes seven items that have been identified as the most critical components to include in a 4-H Science Program, so this is a good place to start when planning to teach a lesson.

Let's begin with the Science Abilities list. What abilities will youth practice in this lesson as written? (Predict, Observe) This lesson is a *Guided Inquiry* activity. Much of the experimental design is prescribed. Youth are told the type of seeds to use, the treatment of the seeds such as moisture and temperature, and the expected length of time to sprouting.

Is there an opportunity to include more science abilities? YES! Using the list of Science Abilities and the Inquiry in Action Flowchart an *Open Inquiry* experience that is more Science Rich can be created.

Reinventing the Activity

Beginning at step 1 on the Inquiry in Action flowchart, the coach will lead a discussion with youth about what they know about seed germination. Are all seeds alike? Instead of restricting youth to lima or kidney bean seeds, why not provide learners with a variety of seeds?

Corn is in the grass family; it has only one cotyledon. The beans have two cotyledons. In part 1 of this activity in the Horticulture book, youth learned that cotyledons provide food for growth until the plant can make food with its own leaves. This could lead youth to ask, "Is it better to have two cotyledons, like beans, than to have one cotyledon, like corn? Under what conditions would it be better to have two cotyledons?" Now a whole range of possible questions and experiments have been opened up to them!

At step 3 of the Inquiry in Action flowchart, youth are to ask a question that can be answered through a scientific investigation. To assist youth to ask a question, have them identify all the things they might investigate about germinating seeds. What other variables could there be in the seed experiment? The substrate could be changed. Is sand better than a paper towel for germination? Seeds could be subjected to different temperatures, different amounts of water, or placed in different types of containers. How is the speed of germination or the health of the young plant changed by different variables? Provide a variety of materials such as:

- Corn, bean and other seed types
- Paper towels
- Containers of water
- Petri dishes
- Peat pots, paper cups, recycled single serving yogurt cups
- Water proof trays or similar to place under the plant experiments
- Soil, sand, small gravel
- Fertilizer
- Small fan to simulate wind if available
- Thermometers
- Measuring instruments for the above liquid and dry materials
- Scales
- Hand lens

Before learners design experiments in Step 4, lead a discussion to check for understanding of experimental design. In and experiment, the *dependent variable* is the event studied and the expected to change when the *independent variable* is changed. The *controlled variables* are the things that are not changed.

A team of youth might state their hypothesis about seeds this way, "**If** we place bean seeds on two paper towels and add water to one paper towel, **then** the bean seeds on the moist paper towel will sprout."

- Independent variables answer the question, "What do we change?"
 - One set up of beans has water on the towel, one does not. Water is the independent variable.
- Dependent variables answer the question, "What do we observe?"
 - O Youth will observe the beans which will or will not sprout.
- Controlled variables answer the question, "What so we keep the same?"
 - The type of paper towel, type of bean, and temperature of the room should be the same for both the trials.

Once you have reviewed the experimental design process, learners can move through steps 4 through 11 of the Inquiry in Action flow chart. Science Abilities they have an opportunity to use include Question, Infer, State a Problem, Predict, Plan an Investigation, Cooperate, Test, Measure, Use Tools, Observe, Organize, Summarize/Relate, Interpret/Analyze/Reason, Communicate, and Redesign.

At step 10 on the flow chart the question is, "Are all Teams/Learners satisfied with the proposed analysis of findings?" If the answer is, "yes" they can move on to the next inquiry. If the answer is, "No," the flowchart takes them up to step12. At step 12 "Team re-designs question or asks a new question which can be explored through scientific investigation." This is the cyclical nature of science. In formal education youth rarely have the chance to re-design a project. Allowing learning by trial and error supports the experiential model and gives youth control of their experience.

Remember that item three on the 4-H Science Checklist is the Essential Elements. In this activity 4-H youth development professionals and volunteers can create a positive learning environment by being willing to learn alongside youth and by being comfortable with not having all the answers.

An important skill for youth to practice as they learn to think and act like a scientist, is how to communicate ideas and discoveries. Youth have the opportunity to practice many of the science abilities on the 4-H Science Checklist by creating a Science Investigation Display for a 4-H fair event. A description of the fair class, the display requirements and the judging criteria are provided in the Science section of the State 4-H Fair book.

Appendix A

4-H Science Checklist

A "Science Ready" 4-H experience is a program that is framed in Science concepts, based on Science standards and intentionally targets the development of science abilities and the outcome articulated by the 4-H Science Logic Model. Additionally, it integrates the Essential Elements and engages participants in experiential and inquiry based learning. In addition to the following criteria below, it's also recommended that science programs offer a sustained learning experience which offers youth the opportunity to be engaged in programs with relevant frequency and duration. Utilize the following checklist to self-assess the program you deliver.

To meet the needs of children, youth and the Nation with high-quality science, engineering and technology programs...

Are you providing science, engineering and technology programs based on National Science Education Standards - Science education standards are criteria to judge quality: the quality of what young people know and are able to do; the quality of the science programs that provide the opportunity for children and youth to learn science; the quality of science teaching; the quality of the system that supports science leaders and programs; and the quality of assessment practices and policies. http://www.nap.edu/readingroom/books/nses/

Are you providing children and youth opportunities to improve their Science Abilities?

Predict, Hypothesize, Evaluate, State a Problem, Research Problem, Test, Problem Solve Design Solutions, Measure, Collect Data, Draw/Design, Build/Construct, Use Tools, Observe, Communicate, Organize, Infer, Question, Plan Investigation, Summarize/Relate, Invent/Implement Solutions, Interpret/Analyze/Reason, Categorize/Order/Classify, Model/Graph/Use Numbers, Troubleshoot, Redesign, Optimize, Collaborate, Compare

Are you providing opportunities for youth to experience and improve in the Essential Elements of Positive Youth Development?

Do youth get a chance at **mastery** – addressing and overcoming life challenges in your programs?

Do youth cultivate **independence** and have an opportunity to see oneself as an active participant in the future?

Do youth develop a sense of **belonging** within a positive group?

Do youth learn to share a spirit of **generosity** toward others?

Are learning experiences led by trained, caring adult staff and volunteers acting as mentors, coaches, facilitators and co-learners who operate from a perspective that youth are partners and resources in their own development?

Are activities led with an experiential approach to learning?

Are activities using inquiry to foster the natural creativity and curiosity of youth?

Does your program target one or more of the outcomes on the 4-H Science Logic Model and have you considered the frequency and duration necessary for youth to accomplish those outcomes?

Appendix B- 4-H Science Competency Self-Assessment

Please fill in the circle that tells you how much you are capable of using the knowledge and skills in each of these areas when you work with youth in 4-H Science programs.

	0 Never	1 Sometimes	2 Usually	3 Most of the Time	4 Always
CARING ADULT					
I use language of respect	0	0	0	0	0
I listen to youth in a nonjudgmental way	0	0	0	0	0
I demonstrate shared leadership through youth-adult partnerships	0	0	0	0	0
I encourage youth to think about what they are learning	0	0	0	0	0
I make verbal contact with all youth	0	0	0	0	0
I encourage learners when they experience setbacks	0	0	0	0	0
I offer praise and encouragement when youth take initiative and leadership	0	0	0	0	0
I identify, build on, and celebrate the potential of all youth	0	0	0	0	0
I respect youth of different talents, abilities, sexual orientations, and faiths	0	0	0	0	0
INCLUSIVE ENVIRONMENT (BELONGING)					
I help youth feel welcome and part of a group	0	0	0	0	0
I establish a climate of fairness and openness	0	0	0	0	0
I respond positively to the ranges of youths' feelings	0	0	0	0	0
I cultivate a sense of togetherness among youth	0	0	0	0	0
I value and act upon the ideas of others	0	0	0	0	0
I serve as a role model for inclusion and tolerance	0	0	0	0	0
I initiate, sustain, and nurture group interactions and relationships	0	0	0	0	0
SAFE ENVIRONMENT					
I conduct myself in a calm manner	0	0	0	0	0
I reduce or eliminate physical and environmental hazards	0	0	0	0	0
I re-emphasize ground rules related to conduct	0	0	0	0	0
I intervene when safety demands it	0	0	0	0	0
SEE ONESELF IN THE FUTURE

Appendix C- Inquiry in Action Flowchart

4-H Science Inquiry Model

Appendix D- 4-H Science Logic Model

4-H Science Logic Model

Situation \rightarrow Inputs **Activities** \rightarrow **Outputs** Outcomes **Conditions** Knowledge Actions What we invest: What we do: What we produce: Description of challenge, problem, or opportunity: - Select and develop Occurs when there is Occur when there is a Occur when a 4-H Science curricula a change in change in behavior or societal condition is - Federal, state and - Unsolved worldwide - 4-H Science curricula knowledge or the the participants act improved due to a social problems need to private funds. - Select and train upon what they've

- be addressed by science.
- In the US, shortage of scientists & people understanding science.
- Under-representation of women and minorities in science careers.
- Need a diverse pool of trained scientists to frame and solve problems & educate others.
- General population in the US (& worldwide) lacks basic understanding of science methods and content ("science literacy")

- 4-H Infrastructure
- Land Grant University Support
- County Extension administrators and agents, program coordinators, and specialists
- Training
- Knowledge
- Collaborations with external researchers
- Collaborations with science industry leaders

- volunteers
- Market 4-H Science to increase participation
- Conduct non-formal education (learning and teaching, facilitated inquiry and discovery)
- Facilitate question formation and problem solving through guided activities
- Provide or supplement math programming
- Teach youth about academic and career choices, requirements

Who we reach (Participation):

- Extension administrators, LGU and Extension faculty and staff)
- Youth (grades 3-5, 6-8, 9-12)
- Federal, state & private funders
- Partners
- Public

- New instructional methods
- Trained staff and volunteers
- Adult participants engaged
- Youth participants engaged
- Partners (Other Federal agencies, science museums, youth organizations, etc.) collaborating
- Marketing materials
- Evaluation materials

- participants learn:
- Increased awareness of science among youth
- Improved science skills (scientific methods) and knowledge (content areas) among youth
- Increased awareness of opportunities to contribute to society using science skills
- Increased life skills (self-efficacy) among youth

- Youth apply science learning to contexts outside the 4-H courses (e.g., school classes, science fairs, invention contests, etc.)

learned and:

- Youth adopt and use new methods or improved technology
- Youth express interest/demonstrate aspirations towards science careers (career fairs, job shadowing, volunteer work or internships)
- Youth raise questions and identify problems to be addressed using science

- participant's action taken in the previous column:
 - Increased number and more diverse pool of youth pursuing education and careers in science related fields
 - Increased and more diverse pool of trained teachers, educators, scientists
 - Increased innovation addressing social problems using science
